WELLHEAD PROTECTION PLAN PHASE II 5 YEAR UPDATE

FEBRUARY 2017

CITY OF GOSHEN, INDIANA

February 3, 2017

Mr. Jim Sullivan
Indiana Department of Environmental Management
Office of Water Quality- Drinking Water Branch, Groundwater Section, IGCN 1255
100 N. Senate Avenue
Indianapolis, IN 46204

RE: Phase II Wellhead Protection Plan 5 Year Update, City of Goshen (PWSID # 5220009)

Dear Mr. Sullivan:

Peerless-Midwest, Inc. (PMI) was contracted by the City of Goshen, Indiana (the City) to complete the Phase II Wellhead Protection (WHP) Plan 5 Year Update for the City's Well Fields. A summary of the updates is provided below.

BACKGROUND

The City provides drinking water to a population of 31,719. The City's Wellhead Protection Area was approved by the Indiana Department of Environmental Management (IDEM) on October 1, 2000. The City's WHP Phase II Plan was approved by IDEM in February 2012. The Phase I delineation approval letter is provided in Attachment A.

The State of Indiana requires that Wellhead Protection Plans (WHP Plan) be updated every 5 years after the Phase II is approved, regardless of service size. Goshen's Five Year Update is due to IDEM by February 9, 2017.

PRODUCTION WELLS

Goshen operates 9 production wells at two separate well fields. The "North" well field and associated water treatment plant consists of production wells 1A, 2, 3, 5A, 6A, and 7A. This well field is located in the northern portion of the City limits east of State Road 15. These 6 wells are completed in the semi-confined sand and gravel aquifer. The "Kercher" well field and associated water treatment plant are located on the south-central portion of the City limits and consists of production wells 12, 13 and 14. These 3 wells are also completed in a semi-confined sand and gravel aquifer. Goshen's production wells and associated well fields are included in attached Figure 1. The Indiana Department of Environmental Management (IDEM) has completed a Source Water Assessment for Goshen and determined that the community's municipal wells have a moderately high susceptibility to be impacted by potential sources of contamination (http://www.in.gov/idem/cleanwater/2451.htm).

TABLE 1 Goshen Production Well Summary

Well Field	Well ID	Easting (meters) ¹	Northing (meters) ¹	Pump Rating (gpm)	Well Depth (feet)	Well Diameter (inches)	Screen Interval (feet)
	1A	597,397	4,604,628	1,200	170	12	145-170
	2	597,329	4,604,693	500	145	12	125-145
North	3	597,339	4,604,689	1,000	156	12	136-156
North	5A	597,359	4,604,677	1,200	169	12	139-169
	6A	597,367	4,604,671	1,200	152	12	132-152
	7A	597,382	4,604,663	1,200	161	12	131-161
	12	598,999	4,601,238	1,500	188	12	168-188
Kercher	13	599,031	4,601,253	1,800	193	12	158-193
	14	599,060	4,601,270	2,000	225	16	181-225

¹Easting and Northing Coordinates are provided in UTM, Zone 16, NAD 1927.

Well Field Production Data Review

In December 2015, PMI contacted IDEM to determine if an update to Goshen's Wellhead Protection Area (WHPA) delineation would be required. PMI provided IDEM with the recent annual groundwater production data for the municipal wells. The system is currently averaging 170,461 cubic feet per day (ft³/day) at the North well Field and 318,590 ft³/day at the Kercher well field compared to WHPA delineation modeled pumping rates of 475,438 ft³/day and 372,761 ft³/day, respectively.

Since the original delineations performed during the Phase I WHPP implementation, several wells have been abandoned and replaced at the North well field. However, the *net* number of modeled wells has not changed. Well 7 has been abandoned and replaced with Well 5A. Well 4 has been abandoned and not been replaced. In the original delineation Well 4 was included in the model, and while Well 5 was constructed at the time of delineation it was not being utilized at the time, so it was not included in the model. We believe that the current production from Well 5A essentially "replaces" the production from Well 4 in the model. IDEM agreed, and concluded that an update to the delineation would not be required for this Phase II 5 year update.

A summary table of recent well field production and the IDEM correspondence are provided as Attachment A. The North well field 1 and 5 year time of travel (TOT) WHPAs and Kercher well field 1, 5, and 10 year TOT WHPAs are included as Figure 1.

Local Planning Team Representation

A Local Planning Team (LPT) was established in January 1999 to help guide the present and future activities of the City's WHP Plan. They met again in February 2009 during the Phase ${\rm I\!I}$

WHPP implementation. Since then, the LPT has failed to meet regularly, and the responsibilities of the WHPA have fallen to the Goshen Board of Public Works and Safety. Meetings are held every Monday and are open to the public. Any issues or concerns regarding the WHPA are addressed at this meeting.

A meeting was held on January 27th, 2017 to update/refresh emergency contacts and inform the public on the WHPA and address any new concerns regarding the WHPA. Since this was an irregular meeting, public notice was made on the City's website calendar. Attachment B shows the notice as was presented on the calendar. Attachment B also includes the LPT sign-in sheet from the meeting.

Inventory of Potential Sources of Contamination

The Potential Contamination Sources (PCSs) are identified by searching federal and state databases and conducting a "windshield survey" of the WHPA. Previously, 26 PCSs were identified in the North well field, all of them regulated, while 8 PCSs were identified in the Kercher well field, 4 regulated and 4 unregulated. As part of this WHP Plan update, a comprehensive database search was conducted by Environmental Data Resource, Inc. (EDR) on April 21, 2016 (reduced EDR report in Attachment C, complete EDR report on CD in back cover). This report identifies PCSs as regulated by the federal and state government agencies. A windshield survey was conducted on May 20, 2016 to identify any unregulated PCSs present within the City's WHPAs.

There are 62 regulated PCSs identified within the City's North 5 year WHPA, 39 of which have been added since the Phase II WHP Plan. Two sites were removed after discovering they were not within the 5 year TOT. There are 11 unregulated PCSs identified within the City's North 5 year WHPA, 10 of which have been added since the Phase II Plan. One site previously identified as "regulated" was not identified for this update and is thus listed as "unregulated." Table 1 in Attachment C provides a summary of the regulated PCSs. Figure 2 shows the locations of the possible sources of contamination.

There are 8 regulated PCSs identified within the City's Kercher 10 year WHPA, 6 of which have been added since the Phase II WHP Plan. There are 6 unregulated PCSs identified within the City's Kercher 10 year WHPA, none of which have been added since the Phase II WHP Plan. Two sites previously identified as "regulated" were not identified for this update and are thus listed as "unregulated." Table 2 in Attachment C provides a summary of the Kercher well field PCSs. Figure 3 shows the locations of the potential sources of contamination.

Land uses within the 5 Year North and 10 year Kercher WHPAs were reviewed as part of this update. No significant changes in land use within the WHPA were observed in the last 5 years. Figures 4 and 5 show the land uses within the North and Kercher WHPAs, respectively.

During an inspection by Goshen storm water department personnel of storm water improvements on July 26 and 29, 2016, a trail of an oily substance was noticed on the ground. Upon investigation, it was determined that the contaminant was coming from a nearby business, Best Sweeping, located at 414 North Main Street. While initially noted as a storm water ordinance violation, the business owner was also informed of its location within the North well

field's 1 year TOT WHPA, and the threat this discharge posed to the City's drinking water source. This location is noted as Map ID #5 on the North well field's PCS table and map (Figure 2). The City issued a notice of violation to the business owner on August 1st, 2016 and will monitor remedial action of the business to ensure compliance of the violation notice and serious potential for groundwater contamination. A copy of the notice of violation given to the business owner is provided in Attachment C.

Wellhead Protection Area Management Plan

The goal of the management plan is to specify how the PCSs identified within the WHPAs and activities within the wellhead sanitary setbacks will be managed in order to prevent them from negatively impacting groundwater. The City's 2010 WHP Plan specifies public education and outreach strategies as the primary management tool for protecting groundwater within the sanitary setback areas and WHPAs.

Property Owner Notification

PCSs identified in Attachment C who were not previously identified as PCSs were mailed notification letters. Using the PCS inventory, a mailing list was developed by PMI and letters were mailed out in July 2016. The letters specify if the PCS is located within the North or Kercher WHPA. Included in the notification letters is information on pollution prevention, proper use and storage of chemicals, maintaining private septic systems, Household Hazardous Waste (HHW) disposal locations and contact information, and locations of the WHP Plan. Also included is a map of the WHPA. An example of the updated notification letters are provided in Attachment D.

WHP Plan Availability

Upon IDEM approval of this Phase II Five Year Update, a copy of this update will be made available at the North well field Water Treatment Plant located at 308 North 5th Street in Goshen.

Transportation Routes

The Norfolk Southern Railroad travels through the southern portion of the North well field WHPA. The City sent out a notification letter to the railroad informing them of the presence of the City's WHPA. Included with the notification letter were emergency contact names and numbers in the event of a railroad accident or spill.

The Northern Indiana Public Service Company (NIPSCO) operates major natural gas pipelines in two areas of the North well field WHPA. The City sent out a notification letter to the utility company informing them of the presence of the City's WHPA. Included with the notification letter were emergency contact names and numbers in the event of an accident.

County Road 38 bisects the Kercher 5 Year TOT WHPA, while Indiana State Roads 4 and 15, US Highway 33, County Road 22 all travel through the North well field WHPA.

Pollution Prevention

Information about abandoning wells not in use within the WHPAs is included within the notification letters being sent out to new PCSs. Example notification letters are provided in Attachment D.

Since the last update, one well has been abandoned by the City. In 2016, a monitoring well was discovered on at the North well field. This well was uncovered during construction on site and was previously unknown to water department personnel. As good stewards of groundwater, the City chose to abandon this well to prevent any possible groundwater contamination. The location of the well is indicated on Figure 2, and the abandonment log as submitted to IDEM is provided in Attachment D.

Public Education & Outreach

The City has a number of management strategies specifically related to public education and outreach to inform the public about groundwater protection. As noted previously, newly identified potential contaminant sources were mailed notification letters regarding attention to and proper disposal of possible contaminants. One Household Hazardous Waste disposal site is located within 20 miles of Goshen. The Elkhart County Landfill and Solid Waste District organizes a Household Hazardous Waste collection on the first Saturday of the month at the Elkhart County Correctional Facility in Elkhart. As discussed previously, the City maintains a copy of this updated WHP Plan at the North well field Water Treatment Plant at 308 North 5th Street in Goshen.

In accordance with the US Environmental Protection Agency (EPA)'s Safe Drinking Water Act (SDWA), the City publishes an annual Consumer Confidence Report (CCR) to inform customers of the quality of the City's water. Goshen's CCR provides phone numbers, Board of Public Works meeting times, water quality data, how to protect drinking water, and HHW/pharmaceutical drop off information. A copy of the 2015 CCR is provided in Attachment D.

The City follows a Standardized Monitoring Framework (SMF) to sample groundwater for contaminants. A copy of the current monitoring schedule is provided in Attachment D.

A copy of the City's WHPP is available to the public online on the City's website.

Bethany Christian Schools in Goshen takes an annual tour of the water treatment plant. During the tours, the importance of being good stewards of groundwater is emphasized.

Sanitary Setback Control

The City will continue to maintain the sanitary setback surrounding the City's wells. The wells were constructed following IDEM construction regulations. All of Goshen's wells are completed in an unconsolidated aquifer. City utility employees have been informed on the restriction of mixing, storage, or application of chemicals within the sanitary setback except for chemicals used for water treatment (chlorine, fluoride and phosphate). The wells are located within fenced areas with video surveillance and door alarms tied to the City's system.

The sanitary setback areas of all existing wells have been visually surveyed and no significant sources of contamination were located around the wells at the Kercher well field. The City's

Central Garage was co-located with the North well field. Central Garage still maintains the City's vehicle and equipment fleet and in the course of doing business uses and stores measurable quantities of new and used oil. Smaller volumes of other automotive fluids are also stored on the property. In 2013, Central Garage was relocated to 320 Steury Ave and is no longer located within the 200' sanitary setback of the North well field. However, they are in the 1 year TOT of the North well field and are practicing proper containment of their automotive fluids. Additionally, there are records indicating 3 buried underground storage tanks on the North well field property. Long term goals for the North Water Plant should include the verification of the existence of the buried tanks. If the tanks are found to exist, the Water Utility will have the tanks removed and closed in accordance with IDEM regulations.

In the summer of 2016, construction at the North well field property revealed some potentially contaminated soil at the site. Keramida, Inc. (Keramida) of Elkhart, Indiana was called out to do an initial site characterization, which included a Geoprobe® soil and groundwater sampling event to identify and evaluate any potential contamination at the site. Keramida concluded that there were indeed contaminants at the site, most likely petroleum products indicative of a historic petroleum release. Keramida then proposed a full monitoring well network and sampling schedule to the City of Goshen. The City notified and coordinated with IDEM, Division of Land Management to ensure remediation efforts were in agreement with IDEM procedures. IDEM provided their feedback to the City, and Patriot Environmental and Engineering, Inc. (Patriot) of Indianapolis, Indiana responded with a revised proposal based on IDEM's feedback. The summary of findings from Keramida, IDEM's response, and the proposal from Patriot are all included as Attachment E.

Wellhead Protection Area Contingency Plan

The goal of the contingency plan is the protection of the well field in emergency situations that may threaten the groundwater supply and distribution. The City contingency plan includes response protocol, public notification procedures and methods of containment, identifies City personnel, contractors, and critical users and includes methods for isolating portions of the well field and/or providing water from an alternative source. A copy of the contingency plan is available is Attachment F. The only major modifications to the contingency plan have been contact updates. A copy of the Contingency Plan is permanently available at the North well field Water Treatment Plant at 308 North 5th Street in Goshen and at the Goshen Fire Department at 209 North 3rd Street in Goshen.

The City will instruct the police and fire departments to make sure all of their employees are aware of the location of the City's WHPA and review the contingency plan emergency contact numbers and procedures. The fire department and water department staff have a great working relationship and communicate frequently with each other, especially if a spill occurs within a WHPA and/or might contaminate the city's storm sewer system. Training has not been provided recently by the water department; however, going forward the water department plans to conduct training at least annually at the fire department or North well field water treatment plant. The need for quick response should be emphasized. New employees within the City's DPW, police and fire departments will be given instruction within one month of employment as part of their initial training. Fire trucks for the City have the WHPA delineation downloaded into

the mobile GPS unit in the truck to inform firefighters if an accident is within a WHPA. This allows fire department personnel to be informed before they even arrive on site (saving crucial time) and modify their course of action on scene appropriately.

As the county seat, the City of Elkhart's Fire Department is HAZMAT certified and would be the department responsible for responding if a spill occurred within Goshen's WHPA. In the event of a spill, the Goshen Fire Department would contact the Elkhart Fire Department and inform them of the emergency.

Each copy of the plan will include a map of both of the City's WHPAs. Once the revised Contingency Plan is distributed, any older copies of the plan should be destroyed.

* * *

We appreciate the opportunity to provide the City with this WHPP update and look forward to working with you in the future to maintain the WHPP. Should you have any questions or like to discuss further, please call.

Sincerely,

Kate Braunschneider

RE: WHPA Delineation Review

Dear Mr. Perry,

This letter conveys the IDEM's approval of the Phase I Wellhead Protection Area delineation. The delineation of a WHPA is an important step in your community's efforts to protect the drinking water supply. Once the area that needs to be protected is identified and mapped, the inventory of potential contamination sources in the area can be used in the planning phase of the process. used on our review, the community can proceed with the next steps outlined in the Indiana Wellhead Protection Program. These seeps include:

- public participation in the wellhead protection local planning team
- identification and inventory of potential sources of contamination in the WHPA
- development of a WHPA management plan that describes management tools, contingency plans and educational efforts in the area

We commend your progress in completing a State approved WHPA delineation. If we can assist you in any way as you work to complete your Phase I management plan, please contact the IDEM wellhead protection technical staff toll-free at 800/451-6027 (ask for 308-3326).

Sincerely,

Jack Wittman, Ph.D

ach With

Mary Hoover, CPG

Subject: RE: Goshen Phase II 5 Year Update

Hi Kate,

Thanks for the information. I reviewed the pumping data that you sent and would agree that since well 5A essential replaces abandoned well 4, and that the modeled pumping rate is still very conservative (three year average pumping rates are significantly below the modeled rate), the Phase I Wellhead Protection Area should still be sufficient and the City of Goshen won't need to redelineate for the 5-Year Update.

To confirm this, I'm requesting two items to help us updated our Public Water Supply database: 1) an updated map of the (North) wellfield, showing location of the current pumping wells (annotated with the well names/numbers). A basemap using an aerial photo would be ideal. And 2) the abandonment log for well 4, if available.

Thanks again,

Alex Riddle, Geologist
Ground Water Section - Drinking Water Branch

Subject: Goshen Phase II 5 Year Update

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. ****

Alex,

The City of Goshen has asked us to work on their Phase II WHPP 5 Year Update. The plan is due February 9, 2017. Concerning the delineation, I have attached the last three years production data on the nine Goshen wells. Wells 1A, 2, 3, 5A, 6A, and 7A make up the North wellfield, while wells 12, 13, and 14 make up the Kercher wellfield.

In the Phase I delineation for the North wellfield, wells 1A, 2, 3,4, 6A, and 7 were modeled. Well 5 was also present, but not being utilized at the time, so it was not included in the original delineation. Since then, well 4 has been abandoned. We believe well 5 has been abandoned and replaced with well 5A. Well 7 has also been abandoned and replaced with well 7A. We feel that the current production from well 7A is similar enough to originally modeled well 7 to essentially "replace" it in the delineation model. Likewise, because well 5 was never originally modeled and well 4 has not been

replaced, we feel that current production from well 5A would "replace" well 4 in the delineation. In all, there is no net change in the number of modeled wells from the original Phase I delineation. The wellfield spans approximately 900 feet, so the wells are all in relatively close proximity to one another. Production is also significantly lower than the original Phase I modeled rates.

In the Kercher wellfield, none of the wells have been utilized in the last 3 years. We wish to keep the current delineation intact, however, in case the city decides to start up production again.

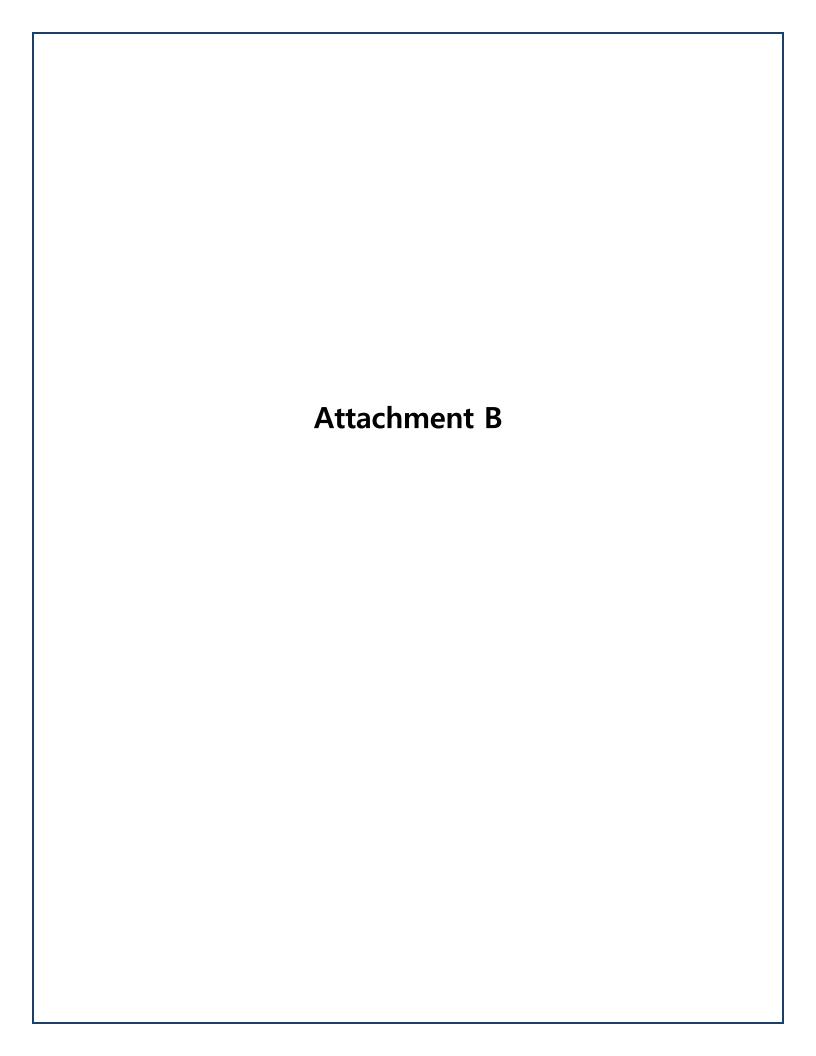

Due to the low production rates and the "replacement" nature of the wells at the North wellfield and the possibility of production again at the Kercher wellfield, we believe that re-delineation is not necessary for either wellfield. Please advise on IDEMs thoughts about re-delineation.

Thank you and have a great holiday,

Kate Braunschneider

Environmental Interest/Information System

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic

data exchange over the Network Node.

Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System

IN-FRS (Indiana - Facility Registry System). The Indiana Department of Environmental Management (I-DEM) has implemented the Indiana-Facility Registry System (I-FRS). The I-FRS provides the interface and processes to link facility data monitored by multiple State and EPA program systems. In addition, I-FRS enables IDEM to reconcile environmental data and exchange it with EPA FRS using the electronic data exchange over the Network Node.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
